VIT BHOPAL

VITyarthi PROJECT

PROJECT REPORT

NAME : AYONIZA ANUP
REGISTRATION NUMBER : 25BCE10129
YEAR : FIRST YEAR
DATE OF SUBMISSION : 29/03/2026
COURSE : DIGITAL LITERACY
COURSE CODE : CSE0001

INTRODUCTION

- This project is developed as part of the CSE0001 - Digital Literacy course at VIT Bhopal University. The primary objective of this report is to document my journey as a newly appointed Student Digital Ambassador. In this role, I am responsible for guiding my peers through the complexities of the modern digital landscape, ensuring they can communicate safely, professionally, and effectively.

- The project is structured around five core modules that build a foundational Digital Literacy Portfolio. These tasks include creating educational infographics, establishing a professional online presence on platforms like GitHub and LinkedIn, mastering cloud collaboration tools, and developing essential skills in email etiquette and cybercrime awareness. By consolidating these deliverables into a public GitHub repository, this project serves as both a practical academic assessment and a professional roadmap for my future career in the digital world.

TASK 1: PRESENTATION

- This design was created using the presentation tool Canva. The layout is organized into four clear sections to make the information easy to read and understand. The design explains what digital literacy is, highlighting the importance of using technology effectively, responsibly, and safely. It also includes sections on useful digital tools, such as productivity and collaboration platforms, safe internet practices like using strong passwords and protecting personal data, and email etiquette, including writing clear and concise messages.

- The overall design uses simple colors, headings, and bullet points to keep the information visually clear and accessible for students. One thing I found interesting while making this was how organizing information into sections makes it much easier for readers to follow. However, I found it a bit difficult to balance the amount of text with the layout, as I wanted to include enough detail without making the design look crowded.

TASK 2: STUDENT DIGITAL PORTFOLIO

- GitHub, LinkedIn, and Kaggle are key platforms that support both skill development and career growth for a BTech student. GitHub is used to host, manage, and showcase your coding projects, acting as a practical portfolio of your technical abilities. LinkedIn functions as your professional identity, where you present your achievements, connect with industry professionals, and explore internships or job opportunities. Kaggle focuses on data science and machine learning, providing real-world datasets, competitions, and community-driven learning resources.

- In the first year, build a foundation by creating profiles, learning GitHub basics, setting up LinkedIn, and exploring Kaggle. In the second year, start uploading structured projects, add certifications and skills on LinkedIn, and participate in beginner Kaggle competitions. During the third year, focus on advanced projects, open-source contributions, active networking, and publishing Kaggle notebooks. In the final year, refine all profiles, highlight your best work, and apply for internships or jobs through LinkedIn. Together, these platforms help you showcase skills, build a strong network, and enhance your overall employability.

TASK 3: CODING AND COLLABORATION PLATFORMS

- Google Sheet (Response View) Link - https://docs.google.com/spreadsheets/d/1TST1AnTRDjx3wo1krOPdoGPkQ01pv9PKXkrTjeq4oA0/edit?usp=sharing

- **Google Forms** is a simple and effective tool used to create quizzes like the one in the given spreadsheet by converting questions into an interactive online form. To build the quiz, features such as the **"Make this a quiz" setting**, multiple question types (MCQs, short answer, checkboxes), and the **answer key with assigned points** are used for

automatic grading . The quiz can also be linked to **Google Sheets**, where all responses are stored and analyzed in the form of charts and scores.

- Additional tools include customization options (themes, sections, and descriptions), response settings (collecting emails, limiting attempts), and feedback features that provide explanations after submission. Google Forms also allows real-time collaboration and easy sharing via links, making it convenient for group projects.

- Academically, these tools are highly beneficial as they help students design structured assessments, analyze data efficiently, and understand concepts through instant feedback. They also improve digital literacy, data handling, and evaluation skills, which are essential for modern education. Overall, using Google Forms for quiz creation promotes interactive learning, saves time in grading, and enhances both teaching and self-assessment processes.

TASK 4: PROFESSIONAL AND EMAIL ETIQUETTE

- A real problem caused by poor digital communication often occurs in group projects. For example, a team working on a college assignment may rely only on brief text messages without clear instructions or deadlines. One member might misunderstand the task requirements and complete a different section than expected, while another assumes someone else is handling a key part. Since there is no proper confirmation or detailed discussion, the mistake is only discovered close to submission time. This leads to incomplete work, last-minute stress, and lower grades. The issue arises due to lack of clarity, absence of structured communication, and no regular updates. This situation

highlights the importance of clear messaging, proper coordination, and using effective tools like shared documents or meetings to avoid misunderstandings.

TASK 5: CYBERCRIME AWARENESS

- What surprised me most while researching cyber crime was how common and sophisticated everyday attacks have become, especially phishing and identity theft. I realized that even simple actions like clicking on unknown links or using weak passwords can lead to serious consequences such as data loss or financial fraud. It was also surprising to learn that many cyber attacks target ordinary users, not just large organizations.

- As a result, one habit I will personally change is improving my password security. I will start using strong, unique passwords for different accounts and enable two-factor authentication wherever possible. This small change can significantly reduce the risk of unauthorized access and help protect my personal information online.

CONCLUSION

- Completing this project has been a transformative experience in understanding my role as a Student Digital Ambassador. By working through the five modules, I have not only enhanced my technical proficiency with tools like GitHub, Canva, and Google Workspace but also deepened my understanding of professional ethics and online safety.
- Transitioning from a passive internet user to an active, digitally literate professional has equipped me with the skills to navigate the academic world securely and effectively. This portfolio now serves as a foundational asset that I will continue to build upon throughout my four years at VIT Bhopal University, ensuring a responsible and impactful digital presence.
